

Chamber washing machines

Suitable for pre-, intermediate- and final cleaning in production processes and maintenance

- Wash
- Rinse
- disinfection

Kammerwaschanlagen

APPLICATIONS

Chamber washing machines are used to clean different workpieces before further processing in production and maintenance.

Depending on the design of the systems, both light and heavy soiling can be removed. The systems can be used in almost all branches of industry.

Various sizes and designs also available with multiple tanks.

TO BE CLEANED FOR EXAMPLE

- | | | |
|-----------------|----------------|---------------------|
| • axes | • transmission | • Paloxen |
| • Container | • container | • Toiletten |
| • meat trolleys | • valves | • Ddrive shaft |
| • valves | • casing | • transport vessels |
| • | | |

POSSIBLE ACCESSORIES

- suction
- carriages
- waste water treatment plants
- filter systems
- material flow systems
- oil skim devices
- loading facilities
- Deliver wagon
- drying
- water treatment plants

EQUIPMENT

- all media-touched parts and cladding in stainless steel
- Standard with lifting door
- electrically heated
- thermally insulated
