

Rhönrad cleaning machine

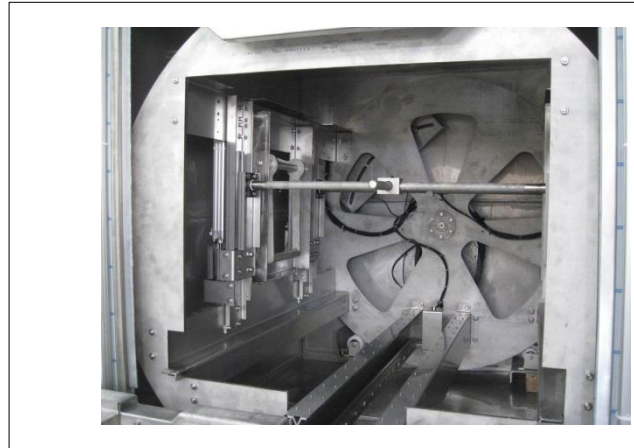

Suitable for cleaning of scooping parts

- wash
- rinsing
- dryings

Rhönrad cleaning machine

CONSTRUCTION / FUNCTION

Our Rhönrad cleaning machine are available in various sizes and designs with multiple tanks. Depending on the requirement and the type of laundry, the workpiece is swiveled or completely rotated. Due to the rotational movement, all parts empty. Residues of wash liquor in the parts is thereby avoided. For each treatment process, the systems have a separate nozzle system with its own storage tank.

APPLICATIONS

Rhönrad cleaning machine are designed for the cleaning of different and creative workpieces from the production. The feed of the system can usually be achieved with existing transport containers, whereby the transfer of the parts is eliminated. Depending on the design of the systems, a wide variety of workpieces can be cleaned.

POSSIBLE ACCESSORIES

- suction
- carriages
- chemical dosages
- material flow systems
- vapor condenser
- steering
- drying

EQUIPMENT

- all media-touched parts and cladding in stainless steel
- Standard with lifting door
- electrically heated
- thermally insulated
