

Moving unit

- fully automatic cleaning of containers
- pneumatic or electric movement option
- internal cleaning of containers, dissolvers and agitators

Moving unit

The stationary cleaning systems are an integral part of the production plant and are optimally integrated into the respective manufacturing process with modern control concepts. The right cleaning nozzles, cleaning devices, pumps, measuring technology and controls are available for the different branches of industry.

EQUIPMENT

- fully automatic cleaning of containers with 360° spray pattern
- Travel lengths up to 4m, lengths on request
- Viewing window in both end positions
- closed housing with hinge cover
- Pressures up to 250 bar
- Can be retrofitted on all containers
- Integration into the existing control system
- complex controls
- pneumatic or electric traversing option
- ATEX version
- Cleaning also with solvent
